

Automatic break-out station

Spice ECCru

Automation

Prevention of powder scattering

Improve work efficiency

Previously, the printed objects had to be removed manually, but with ECCru, you can simply set the cake and have it automatically broken with the push of a button, achieving a more efficient production flow.

The unprinted parts of the cake act as a cushion, allowing the printed object to be removed without being damaged.

► Specification

Product dimensions	W2210 x D900 x H1968 mm
Product weight	1400kg
Electrical specifications	200V three-phase 15A
Air specifications	0.4Mpa

Auto Powder Conveyor

This is a device that automatically transports unformed powder from the breaker to the tank. The transported material does not come into contact with the sliding parts, and it is seal-less, so there is no need to worry about leakage or foreign matter getting into the pump. By using it in combination with Spice ECCru, it is possible to work without scattering powder.
